

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
LOS ANGELES REGION

November 6, 2003  
468<sup>th</sup> Regular Board Meeting  
Item No. 15

TENTATIVE WASTE DISCHARGE REQUIREMENTS  
BROWNING-FERRIS INDUSTRIES OF CALIFORNIA, INC.  
(SUNSHINE CANYON CITY LANDFILL)

**SECOND CHANGE SHEET TO**  
**OCTOBER 23, 2003 TENTATIVE WASTE DISCHARGE REQUIREMENTS**

**Page 11 (Page 12-27 in Board Meeting Package): A finding has been added after Finding No. 71 for a possible reopening of the WDRs:**

72. Water Code section 13263, subdivision (e), requires the Regional Board, upon the request of any affected person or upon its own motion, to review and revise waste discharge requirements. That subdivision further requires the Regional Board to review waste discharge requirements periodically. At the time of adopting this Order, the Regional Board has determined that at least two circumstances would require the Regional Board to review and to potentially revise these requirements in the future. As a result, this Order contains two reopeners. The first requires the Regional Board to review these requirements if the Clean Water Act section 401 (water quality certification) and section 404 (dredge and fill permit) processes alter the determinations made pursuant to 40 CFR 258.12(a)(1),(4). The second requires the Regional Board to review these requirements if subsequent health studies of persons residing in the vicinity of the Landfill determine that there is an elevated risk of illnesses associated with the Landfill.

**Page 24 (Page 12-40 in Board Meeting Package): A “Reopeners” section has been added after Section P:**

**M. Reopeners**

The Regional Board will revise these requirements if:

1. The Clean Water Act section 401 (water quality certification) and section 404 (dredge and fill permit) processes alter the determinations made in this Order pursuant to 40 CFR 258.12(a)(1),(4);
2. Subsequent health studies of persons residing in the vicinity of the Landfill determine that there is an elevated risk of illnesses associated with the Landfill; or
3. The Regional Board determines it is appropriate pursuant to Water Code section 13263, subdivision (e).
